Figure 1: Schematic representation of the experimental design. The diagram shows a timeline of 100 trials, divided into three groups: 100 trials (green), 100 trials (red), and 100 trials (blue). Each trial is represented by a small box with a number inside. The trials are arranged in a grid, with the first 10 trials of each group being identical. The remaining trials are randomized. The groups are separated by vertical lines, and the total number of trials is indicated at the bottom.
